EDUCATION

WEB DEVELOPMENT
App Academy
2020-2021

GENERAL STUDIES
Southern CT State University
2004-2006

SKILLS

Javascript

TypeScript

React/Redux

Vue/Nuxt

CSS/HTML/TailwindCSS

NodeJS

Jest/Cypress

SQL/NoSQL

AWS

Firebase

Supabase

Docker

Kafka

EXPERIENCE

FULL STACK DEVELOPER

ServiceCore

6/2024 - 6/2025

- Designed and implemented a Notification Log feature end-to-end using React, TypeScript, Redux Toolkit Query, Node.js, and Firebase, enabling users to view real time system activity with seamless backend and frontend integration
- Refactored numerous Firebase Cloud Functions and cron jobs to reduce redundancy and improve maintainability, significantly enhancing performance and developer efficiency
- Migrated multiple legacy class based React components into modern functional components using hooks, improving readability, testability, and alignment with current best practices
- Managed efficient state and data fetching using Redux Toolkit Query, streamlining communication between the frontend and backend APIs
- Built and maintained scalable backend services using Node.js, supporting new product features and ensuring system stability
- Utilized Firebase for real-time database updates, user authentication, and serverless functions, powering dynamic application features
- Containerized services with Docker, creating consistent development environments and simplifying deployment workflows
- Developed accessible and responsive interfaces with HTML and CSS, adhering to modern design standards and improving usability across devices
- Collaborated with UI/UX teams via Figma, translating design prototypes into polished, production ready components
- Wrote unit and integration tests using Jest, covering core logic and edge cases to maintain a high standard of code reliability
- Used Jest's mocking capabilities to isolate components during testing, reducing flakiness and speeding up test execution
- Integrated webhooks to deliver live updates across services, enhancing user experience with real time event driven functionality

FULL STACK DEVELOPER

Healthworx (Contract Work)

1/2024 - 3/2024

- Architected and developed Minimum Viable Products (MVPs) for startup ventures, leveraging the power of Vue and Supabase
- Crafted responsive interfaces using Nuxt and Tailwind CSS, ensuring speed of development and reliability
- Utilized Tailwind CSS to create custom theming for web applications, ensuring a consistent and visually appealing user experience
- Implemented Supabase as a scalable backend solution, leveraging its PostgreSQL database, authentication, and real-time capabilities for seamless application functionality

FULL STACK DEVELOPER

Cloudwell (Contract Work)

1/2023 - 1/2024

- Designed user friendly front end experiences for clients with React, HTML and CSS
- Employed Microsoft's Fluent UI to quickly roll out websites to meet customer needs, and build custom components as necessary

FULL STACK DEVELOPER

Ondema

6/2021 - 10/2022

- Created performant React components to handle large data sets and display them in a user friendly manner
- Implemented Apache Kafka to help collect and monitor user metrics
- Updated, created, and deployed AWS Lambdas using Serverless and GraphQL to set up subscriptions, allowing users to see other users interacting with the app in real time
- Led a modernization effort to improve Developer Experience, improving CI/CD times
- Built and expanded upon a robust suite of Cypress and Jest tests, hardening the code base to prevent issues from reaching production
